SMARTER TECHNOLOGY. BETTER CONNECTED.

BUSINESS COMMUNICATIONS • CONNECTIVITY • NETWORKING • SECURITY • IT

One technology partner. Solutions that work for you.

For businesses and homes

www.callryt.co.za

THE CALLRYT DIFFERENCE

One partner for your technology

Practical solutions for the systems you rely on every day.

From the first call to installation and ongoing support, Callryt helps businesses and homeowners choose technology that fits their needs. We bring communications, connectivity, networking and security together so the pieces can work as one.

Communication

Business VoIP and telephone systems that help teams manage calls and stay connected.

Connectivity

Wi-Fi and LTE options designed around your property, coverage and usage needs.

Networking & security

LAN, wireless links, firewall and VPN solutions to connect devices and locations.

CCTV & computers

Security camera systems plus new and reconditioned computer options.

Why work with Callryt?

- Solutions tailored to your environment and budget.
- Professional installation, setup and configuration.
- Technical support, maintenance and troubleshooting.
- A joined-up view of the technology behind your business.

OUR APPROACH

We start by understanding what you need, recommend a practical solution, and help install and support the system you choose.

BUSINESS COMMUNICATIONS

VoIP & Cloud PBX

Professional business communication without unnecessary complexity.

Callryt helps businesses modernise the way they communicate with customers, suppliers and colleagues. Cloud-hosted telephone systems can provide useful call-management features without requiring a traditional on-site telephone exchange.

Smarter call handling

Features may include call routing, transfers, voicemail and automated answering, depending on the chosen service.

Flexible options

Explore a setup suited to your team size, call patterns and working arrangements.

Support for your team

We can help with configuration, programming and technical assistance.

Network-aware planning

Voice quality depends on the wider connection, so we consider connectivity and network requirements too.

LET'S TALK ABOUT YOUR TELEPHONE SYSTEM

Tell us how your team handles calls today and what you would like to improve. We can discuss options that fit your business.

BUSINESS COMMUNICATIONS

On-site Yeastar PBX

Professional business communication. Reliable control. Expert support.

An on-site PBX keeps the telephone system at your premises. Callryt supplies and configures Yeastar PBX solutions for organisations that want a telephone system designed around their operations.

On-site control: Keep the telephone system on your premises and manage it around your business requirements.

Professional call management: Depending on the model and configuration, features can include transfers, routing, voicemail and automated answering.

Connect your team: Support communication between departments and extensions.

Configured for your needs: Options for extensions, users, call permissions and security depend on the selected equipment.

Installation and support: Callryt can assist with installation, programming, maintenance and troubleshooting.

Room to grow: Expansion depends on the chosen PBX model, licensing and configuration.

A SYSTEM THAT FITS YOUR BUSINESS

We can discuss your current setup, the number of users and the features your team needs before recommending a configuration.

WI-FI SOLUTIONS

Stop struggling with poor Wi-Fi

Better coverage. Better connectivity. Better service.

Dead zones, weak signals or unreliable connections can interrupt work and everyday life. Callryt provides Wi-Fi solutions for homes and businesses, with equipment and configuration selected for the environment.

Coverage where needed

Improve access in the rooms, offices or work areas that matter most.

Right-sized equipment

Choose equipment suited to the property layout and connected devices.

Business-ready performance

Plan for video calls, smart devices and day-to-day online work.

Installation and support

Get help with setup, configuration, maintenance and troubleshooting.

From a small home network to Wi-Fi across a larger property, the right design starts with understanding the space and how you use it.

BOOK A WI-FI ASSESSMENT

Contact Callryt to discuss coverage problems and arrange an assessment and quotation.

CONNECT SEPARATE SPACES

Local wireless networking

Reliable connectivity between buildings and work areas.

Where running network cable over a distance is impractical, a point-to-point or local wireless link may help connect buildings, offices, workshops, warehouses or outdoor areas. The suitable design depends on site conditions and line of sight.

- Site assessment to consider distance, obstacles, signal and equipment.
- Connect selected computers, printers, cameras and other network devices.
- Extend a network to a separate building or work area.
- Integrate IP CCTV where the network design and bandwidth allow.
- Reduce the need for long cable runs where a wireless link is appropriate.
- Ongoing configuration, maintenance and troubleshooting support.

ABOUT DISTANCE AND PERFORMANCE

Wireless range and throughput depend on equipment, line of sight, interference, installation and local conditions. Any distance such as “up to 5 km” should be confirmed for the specific site and equipment.

NETWORK INFRASTRUCTURE

LAN, firewall & VPN

Connect. Protect. Communicate.

A reliable network supports phones, computers, printers, Wi-Fi and CCTV. Callryt helps plan and install network infrastructure and security configurations to suit your business.

Local area networking (LAN)

Ethernet connectivity, switches, structured cabling, Wi-Fi integration and network upgrades.

Firewall configuration

FortiGate firewall options can help manage network traffic, apply rules and reduce exposure to unwanted connections.

Network separation

Separate business systems, guest Wi-Fi and CCTV devices where appropriate.

VPN connectivity

Support authorised remote access or connections between business locations, based on the chosen configuration.

Security depends on more than installing a device. Appropriate rules, access permissions, updates and ongoing management matter too.

PLAN YOUR NETWORK WITH CALLRYT

We can discuss your existing setup, the devices you need to connect and the level of access and protection your business requires.

INTERNET CONNECTIVITY

LTE for home & business

A practical option where fibre is unavailable or unsuitable.

Callryt helps customers explore LTE connectivity, suitable routers and installation options based on local coverage and intended use. LTE may be useful for home internet, small offices or selected connected devices.

Coverage first: Check network availability and signal conditions at the installation location.

Suitable equipment: Choose a router and, where appropriate, antenna options based on signal, speed needs and connected devices.

Packages to fit usage: Available data allowances and speed options depend on the current package.

Professional setup: Router placement and configuration can affect the practical performance of the connection.

Local assistance: Callryt can help with installation and troubleshooting of the connection and equipment.

PERFORMANCE VARIES BY LOCATION

Actual speeds and reliability depend on coverage, signal strength, network congestion, equipment and package terms. Ask Callryt to check the options available at your address.

PROPERTY SECURITY

CCTV with Hikvision

Professional security. Reliable technology. Installation the Callryt way.

Callryt installs CCTV solutions using Hikvision technology for homes and businesses. The right system depends on the area to be monitored, lighting conditions, recording requirements and how you want to view footage.

Camera options

Choose models suited to homes, shops, offices, warehouses and other premises.

Day and night monitoring

Low-light and colour night-vision features depend on the selected camera model and conditions.

Remote viewing

Compatible systems can support live viewing, playback and alerts through the Hik-Connect app.

Recording and playback

Compatible DVR/NVR equipment can record footage for later review, subject to storage and configuration.

Professional installation

Camera placement, cabling, power and recorder setup all affect results.

Ongoing support

Callryt can assist with setup, maintenance, troubleshooting and upgrades.

PROTECT WHAT MATTERS

Contact Callryt for a site assessment and a CCTV quotation tailored to your property and budget.

COMPUTING EQUIPMENT

Laptops & desktop computers

New and reconditioned options for work and everyday use.

Whether you need a laptop for flexible working or a desktop tower for an office, Callryt can help you explore computer options based on your requirements and budget.

Laptops

Portable options for mobile work, meetings, study and everyday computing.

Desktop towers

A practical option for fixed workstations and office environments.

New and reconditioned

Ask about current stock, condition, specifications and availability.

Flexible purchasing

Contracts or outright purchase may be available, subject to the applicable terms.

CHOOSE THE RIGHT COMPUTER

Tell us what applications you use, what performance you need and your budget. We can help you consider suitable available options.

Product availability, specifications, warranty and purchasing terms should be confirmed at the time of quotation.

A PRACTICAL PROCESS

From requirement to reliable setup

Technology should solve a problem—not create another one.

1. Understand

We discuss what you need, what is not working and what you want to achieve.

2. Assess

Where required, we consider the site, existing equipment, coverage and technical constraints.

3. Recommend

We outline suitable options based on your requirements, budget and available products or services.

4. Install & configure

We help set up the agreed solution and check the relevant functions.

5. Support

Technical assistance, maintenance and troubleshooting options can be discussed for your setup.

Why Callryt?

We bring multiple technology services under one roof, helping you plan communications, connectivity, networking and security with the wider picture in mind. Our aim is to provide a practical solution suited to your needs—not a one-size-fits-all package.

THE CALLRYT DIFFERENCE

Your business. Your communication. Your connectivity. Our expertise.

LET'S GET YOU

BETTER CONNECTED.
